The energy saving, energy efficiency and the improvement of energy performance are important values for C.E.M.E.S. Spa.

These objectives are to be pursued to improve the company's competitiveness.

Therefore C.E.M.E.S. Spa decided to implement an Energy Management System, designed and developed according to ISO 50001:2018.

The Energy Management System is extended to all operating units with regard to the energy uses of production plants, offices and outdoor areas (construction sites)

In order to achieve the stated objectives, C.E.M.E.S. Spa is committed to:

- take on board and strengthen its awareness of the importance of efficient and correct use of energy resources;
- to progressively improve the company's performance in energy use;
- ensure that its Energy Management System is adequate to the scale and type of its uses and energy consumption;
- ensure the availability of necessary and appropriate human, economic and technological resources; ensure the availability of information, skills and technical-managerial knowledge;
- ensure full compliance with mandatory provisions applicable to its energy aspects;
- aim for the best available technologies management solutions, etc. to improve energy performance, consistent with the company development strategy;
- ensure regular review of the system and compliance with the timetable for planned improvement actions;
- work with suppliers to ensure that they also achieve maximum energy efficiency;
- disseminate and sensitize all staff, according to role and function, in order to empower and share the benefits of more efficient energy management;

The Energy Management System policy is the main document of the System and results in objectives, targets and improvement programs, procedures and operational instructions.
